

## The GoGet CCTV Video Download Software makes retrieving & downloading your CCTV footage simple!

- Schedule CCTV Downloads to your networked PC
- Even Schedule CCTV to be Downloaded over the Internet
- Great for overnight downloads of large CCTV files
- Perfect for routine back-ups of recorded footage
- Simply pick a DVR, time and camera channel
- Compatible with Alien DVRs

The GoGetCCTV Video Download software is a really simple way of approaching a really boring task and can save a large chunk of time out of your day.

### More Details

Simply connect your CCTV recorders (DVRs) to a network, install your GoGet CCTV software and then schedule in the specific CCTV you need to download either for archiving or back up as evidence.

It's a great way of handling large chunks of CCTV footage as the program can be left to run overnight so the files are waiting for you when you arrive at your PC the following morning. Great for Loss prevention or Security teams as the footage is there waiting for them to interrogate further for suspect behaviour.

GoGetCCTV is especially popular with multi-site retailers and food outlets that can download specific camera footage (such as those covering the tills) over the Internet to a central HQ for archiving and routine monitoring.

On a smaller scale, a licensed premises might use the tool to download all the footage from the previous night when an incident has occurred and evidence will need saving for the Police. Downloading the footage ensures a copy is kept for later use and not accidentally overwritten within the recorder.

**This Alien version of GoGetCCTV is for use with Alien DVRs only.**

## Scheduled downloads to a time that suits

One of the most useful features of GoGetCCTV is the ability to automate downloads to a time when you're not using your PC for other tasks (such as overnight or whilst you are out). Just select one or multiple channels, specify the day and period of time you want to download the footage from then simply pick a time that suits you best for the download to take place.

## Set up preferred routine download schedules

GoGetCCTV also allows you to create daily download routines which will automatically retrieve the previous day's footage. It's a really handy tool for reviewing events and creating local backups. The original footage can then be overwritten freeing up vital space on your recorder's hard drive in the process.

## System Requirements

Operating System	Microsoft Windows 7 or later
Processor	Intel i3 minimum
RAM	32Bit Windows: 4GB / 64Bit Windows: 8GB
Screen Resolution	1024 x 768 minimum
Hard Disk	Requires approximately 8Mb

## Licensing

Licences	1 per PC
Support Period	6 Months ticket based support*

\*Downloads within the support period are available via your personalised Control Panel.

## FAQs

### How can I easily download large amounts of CCTV security footage?

#### Answer

To retrieve any CCTV files from a CCTV recorder, you could carry out a quick back up to a USB flash drive or a DVD writer but for much larger amounts of high quality footage you would usually need to connect up your PC either locally or over a network to the recorder. Installing GoGetCCTV onto your PC allows you to perform this task at a time

that really suits you. Rather than “clogging up” resources on your PC whilst you are trying to work, the GoGetCCTV download tool lets you schedule that task for later in the day when you’re not using the PC. For example you might schedule the download to occur in the middle of the night when you have no need to use your PC.

## Can I automatically download CCTV Security footage overnight?

### Answer

Yes the GoGetCCTV download tool lets you schedule an exact date and time for retrieval of the CCTV footage to take place.

Download footage from your DVR/NVR to your PC over a Network

## Can I automatically download CCTV Security footage every single day?

### Answer

Yes if you operate a business that relies heavily on saving CCTV footage in case an incident arises (such as licenced premises) you can program a daily/weekly schedule of which camera feeds should be downloaded and the times covered. Once setup you don't have to worry about remembering to do this or that the CCTV recorder itself has recorded over important police evidence.

Download footage from a DVR/NVR over the internet

## Can I automatically download CCTV Security footage from another site?

### Answer

Yes on most CCTV recorders you can set them up to connect over the Internet and manually retrieve recorded data but this can be a very time consuming job especially if you need to download a large amount of footage. GoGetCCTV is an easy to use automated downloader which allows you to retrieve footage from one or multiple recorders over different sites at a time which suits you best. You may choose to do this at a time when you know your network has less traffic or overnight.

Easily download footage the DVR/NVR day, time, and channel(s) you want
